ARBO FEEDER PERFORMS DOUBLE DUTY

The new and improved ARBO KDA-DV/100RU-DUAL Feeder

The new addition to the bottom agitated ARBO feeder type KDA-DV100RU was developed as a result of ARBO's willingness to listen to its customers' needs.

ARBO's ability to feed sticky fruits is well known. But, as its name describes, the feeder was limited to sticky fruits! A process using sticky fruits often also feeds other, more delicate, products such as chocolate chips, candy or fruit juice snacks. Why not make the sticky fruit feeder more versatile was the next logical step.

The solution: a special hopper insert was designed that allows the sticky fruit feeder to be used to feed delicate materials, thus eliminating the need for a second feeder.

One feeder - two very different materials!

Sticky fruit feeder feeding dried cranberries

By simply adding the hopper insert, the sticky fruit feeder can then be used with free-flowing products. For increased hopper capacity a 4.5 cuft hopper addition can be installed

Sticky fruit feeder with hopper insert feeding jujubes.

- For sticky fruits: total hopper capacity of 2.7 cuft; approximate feed rate of 200 to 2,000 lbs/hr with an accuracy better than 2 % 2 Sigma
- With hopper insert: total hopper capacity of 1.3 cuft; approximate feed rate of 150 to 3,000lbs/hr, depending on the materials' particle size and bulk density

ARBO - *Your difficult material specialist*
